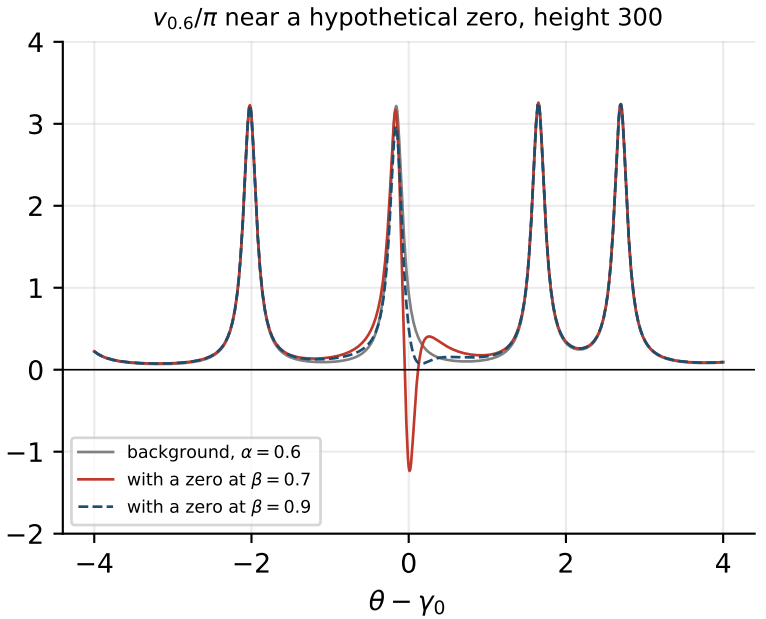
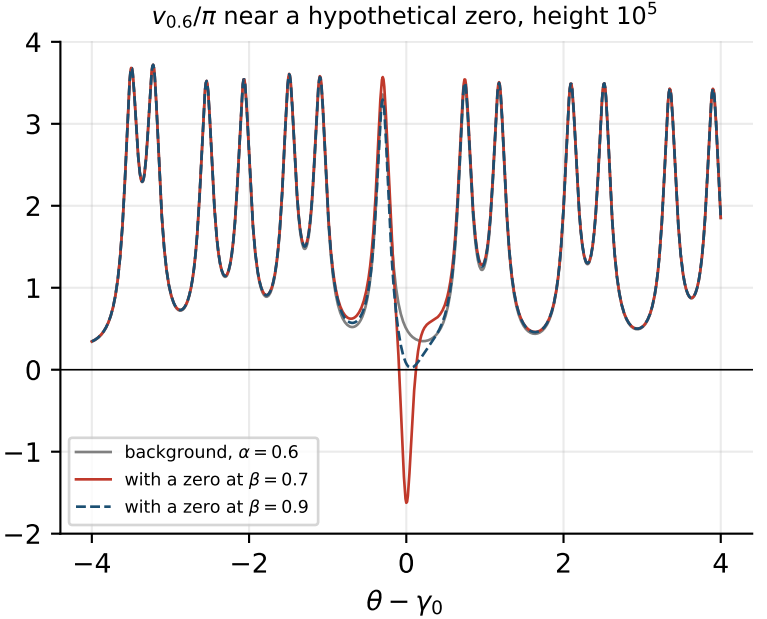
Negative mass jumps to zero at $\alpha = \beta$
$\beta = 0.6$
$\beta = 0.75$
$\beta = 0.9$
number of hypothetical zeros
negative mass on [0, 2000]
basepoint α



$v_{0.6}/\pi$ near a hypothetical zero, height 300
background, $\alpha = 0.6$
with a zero at $\beta = 0.7$
with a zero at $\beta = 0.9$
$\theta - \gamma_0$



$v_{0.6}/\pi$ near a hypothetical zero, height 10^5
background, $\alpha = 0.6$
with a zero at $\beta = 0.7$
with a zero at $\beta = 0.9$
$\theta - \gamma_0$
